Data Protection Templates for HairMela

Prepared by Ayeni Ayomide, Axiahub · Oct 15, 2026

How to use these templates

These are five short, ready-to-use templates, each under a page. Fill in the blanks in [square brackets], adjust anything that does not fit how HairMela works, then share them with staff and keep one printed or pinned copy. They are suggestions based on a review of HairMela's public pages and the survey answers from its management, not legal advice. A data protection adviser can confirm what the law requires.

1. Choose one person to own data protection, and write the name in each template.
2. Fill in the blanks, which should take about 30 minutes in total.
3. Share the templates with every staff member and go through them in one short briefing.
4. Review them once a year, or after any incident.

Template 1: If something goes wrong

Use this when customer or business data may have been lost, stolen, sent to the wrong person or seen by someone who should not see it. Examples: a lost or stolen phone, a hacked account, a phishing link that was clicked, a customer list sent to the wrong chat.

Incident lead: [name and role] · **Phone:** [number] · **Back-up person:** [name and number]

1. **Tell the incident lead straight away.** Do not wait to be sure. Reporting fast, with no blame, limits the damage.
2. **Contain it.** Change the password, log out of the account, lock or wipe the lost phone, or ask the person who received the data wrongly to delete it.
3. **Write it down** in the incident log below, even if it turns out to be small.
4. **The incident lead decides how serious it is.** Ask what data was involved, how many customers, and whether it could cause harm, such as someone being contacted, tracked or tricked.
5. **If the breach is likely to put people at risk,** tell the regulator, the Nigeria Data Protection Commission (NDPC), within 72 hours of becoming aware of it. The Nigeria Data Protection Act 2023 asks for this in section 40. If the risk to people is high, also tell the affected customers promptly, in plain language, and advise them what to do.
6. **Review within one week.** What happened, why, and what one change would stop it happening again?

Incident log (keep it in one place that the incident lead can open):

Date	What happened	Data involved	People affected	Reported to	What we did	Follow-up done
[date]	[short description]	[e.g. names, phone numbers]	[number]	[lead, NDPC, customers]	[action]	[yes/no, date]

Template 2: Customer details on phones and chats

Why: a personal phone can be lost, shared or backed up to a personal account, and a personal chat cannot be controlled by HairMela. Customer details should stay in work tools.

Owner: [name and role] · **Applies to:** everyone who handles customer details

Do

- Use [the HairMela app / the business phone number / the approved work account] for anything involving a customer's name, number or booking.
- Keep a screen lock on every phone or computer used for work.
- Delete customer details from chats once the job is done.
- Turn on two-step verification for WhatsApp, email and cloud storage used for work.

Do not

- Send customer names, phone numbers or payment details to personal chats or groups.
- Take screenshots of customer details and keep them in your phone's gallery.
- Share a work account's password or code with anyone, including colleagues.
- Use public Wi-Fi for work tasks with customer data unless you must, and then only with a trusted connection.

If you break a rule by mistake, tell the incident lead straight away. Nobody is blamed for reporting quickly.

Template 3: Accounts, passwords and people leaving

Owner: [name and role] · **Applies to:** staff, salon owners and anyone with a HairMela admin or work account

Rules

1. **One person, one login.** Never share an account. If someone needs access, create an account for them.

2. **Long, different passwords.** Use at least 12 characters and a different password for each important account. A password manager or a passphrase of several random words works well.
3. **Two-step sign-in** on email, the admin side of the platform, social media accounts and cloud storage.
4. **Access matches the job.** Give each person only what their work needs, and write down who has admin access.
5. **Review access every three months.** Remove accounts nobody uses.

When someone leaves (the owner or manager does this on their last day):

- [ ] Remove or disable their account on the platform and any shared tools.
- [ ] Change shared passwords or codes they knew, such as social media or the Wi-Fi.
- [ ] Remove them from WhatsApp groups and shared folders.
- [ ] Collect any work phone, laptop or access card.
- [ ] Note the date in the access list.

Template 4: How long we keep data

Rule: keep customer data only as long as there is a clear reason to, and delete or anonymise it afterwards. Fill in the periods HairMela decides on, then publish the same periods in the privacy policy.

Owner: [name and role] · **Reviewed:** [date]

Type of data	Why we keep it	Keep for	Then
Account details (name, email, phone)	To run the customer's account	While the account is active	Delete within 30 days of a deletion request
Queue and booking history	So customers can see their history	[e.g. 12 months]	[Delete or anonymise]
Messages to support	To resolve questions	[e.g. 6 months after closing]	[Delete]
Records we must keep by law, such as payment records	Legal duty	[period set by the law that applies]	[Delete]
Backups containing customer data	To recover from a failure	[e.g. 30 days]	[Overwritten or deleted]

Every [3 or 6] months, the owner checks that data older than these periods has been removed and writes the date below.

Last clean-up done: [date]

Template 5: When a customer asks about their data

Use this when a customer asks to see their data, correct it, delete their account, or complains about how their data is used.

Request contact: [one monitored email address] · **Owner:** [name and role] · **Reply target:** within [30] days

1. **Log it.** Write the date, the customer's name or account email, and what they asked for in the request log.
2. **Check it is really them.** Reply to the email address on the account, or ask for a detail only the account holder would know. Do not ask for more personal data than needed.
3. **Do it, or explain why not.** For a copy of their data, send what is held about them in a common electronic format. For a correction, update the detail. For deletion, remove the account and data, except records HairMela must keep by law, and say which.
4. **Reply in writing** and tell the customer what was done and when.
5. **Complaints.** If the customer is unhappy, record it, reply with an explanation, and tell them they can complain to the Nigeria Data Protection Commission (NDPC).

Request log:

Date received	Request type	Account	Done on	Notes
[date]	[copy, correction, deletion, complaint]	[account email]	[date]	[what was done]
