# Simple Data Protection Fixes for HairMela

What is working, and the easy changes that would help most

Ayeni Ayomide, Cybersecurity Trainee, Axiahub

October 2026

## Why you are getting this

Thank you for letting me look at how HairMela protects customer information. I used only what HairMela allowed: your public pages, the app as a normal customer, and the survey your management answered. I did not test or access any system. This short guide lists what is working and the easy changes that would help most. Each fix is small and none needs special software.

## What is working well

Based on your survey answers, HairMela reports that it has the important basics in place:

- Everyone has their own login, and access is limited to what each job needs.
- Access is removed when someone leaves.
- Strong passwords and two-step sign-in are used, and work devices are locked and kept updated.
- Customer details are kept out of personal chats and phones.
- Backups exist and have been tested, and security incidents are recorded.
- Staff have had training, and there is a written policy.

On the app and website, I also saw several good things: the privacy policy is easy to read, you collect very little information, you say you do not sell it, tracking cookies need opt-in, other customers' names are not shown, and there is a clear deletion page with a 30-day promise.

## The easy changes that would help most

The list is in order of importance. The first two take the least time.

### 1. Test your breach plan and write it on one page (most important)

You told us you have a record of incidents and know when to report a breach. Make sure it works when it is needed. Write one page that says who to tell first, what to write down, and who reports to the data protection regulator. A serious breach has to be reported within 72 hours, so the page should name the person responsible and have a back-up. Practise it once with a made-up example. A ready-to-use template is in the templates document.

### 2. Show the consent line and privacy link at sign-up

On the sign-up page there is no sentence or link next to the button saying how information is used. Add one line such as: "By creating an account you agree to our Privacy Policy and Terms," with both words linking to the pages. Also add a link to the privacy policy inside the app. This is only a text change.

### 3. Tell customers their rights and how to use them

The privacy page should say plainly that customers can ask to see, correct or delete their information, and how to ask. Today deletion is by contacting HairMela, and there is no way to ask for a copy of data. Write simple steps for your team to follow (a template is included), and if possible add a "Delete my account" option in the app. State how long different information is kept instead of "as long as needed".

### 4. Name your service providers and keep the agreements

You told us written agreements exist with providers such as hosting and messaging. Keep a short list of who they are and what they handle, and mention them in the privacy policy. Keep copies of the agreements in one place.

### 5. Agree a simple rule for public Wi-Fi

Your survey answer says public Wi-Fi is only partly avoided for work. A short rule is enough: no work logins on public Wi-Fi unless a phone hotspot or VPN is used.

### 6. Keep the good habits going

These are in place, so the aim is to keep them current:

- Keep two-step sign-in on every staff and admin account.
- Hold a short reminder about phishing messages once a year.
- Test restoring from a backup on a regular schedule, not only once.
- Repeat staff training once a year, and when new people join.

## Small wording fixes

- The phone number box on sign-up does not say “optional”, but your policy says it is optional. Add the word.
- The privacy page and the website footer give two different contact emails. Choose one and check it is read.

## Where to start

1. This week: add the consent line and privacy link (fix 2) and agree the Wi-Fi rule (fix 5).
2. This month: write and practise the breach page (fix 1), and publish the rights steps (fix 3).
3. Next: name your providers (fix 4), then keep the good habits going (fix 6).

Please see the flyer for five simple habits your team can use every day, and the templates document for ready-to-use one-page tools.
